KANSAS AGRICULTURAL STATISTICS PROCEDURES AND STAFF

It is a pleasure to present the 2009 edition of the Annual Farm Facts Report. This publication is a cooperative effort between the USDA – National Agricultural Statistics Service's Kansas Field Office, and the Kansas Department of Agriculture.

This Annual Report, called the Kansas Farm Facts, is published each year to meet the diverse needs for a reliable reference book on agricultural production, prices, farm income, and various other economic data within the State. This year there are several changes due to budget constraints and strengthened publication rules. Where it is possible, 2007 Census of Agriculture statistics have replaced data that is no longer collected. The number of farms by selected crop on page 11 was replaced with the number of farms from the Census. The information on pages 6 and 7 were also replaced with Census of Agriculture data. The value of production of all crops and livestock has been discontinued, along with livestock inventory values by county.

The data in this publication were made possible by the voluntary cooperation of the Kansas farmers and agribusinesses who responded to our surveys. A special thanks to each producer and agribusiness who provided data on one of our surveys. We believe that the best source of agricultural data is from producers and agribusinesses.

The survey data were collected by mail, by a secure website, telephone interviews, personal interviews, and in-the-field observations. Most estimates are based on probability sample surveys. That is, information collected from a scientifically selected sample of all producers is used to estimate the activities of the entire group. Sampling is not only less costly in time and money than a complete count, but can be more accurate because reporting errors and data-handling errors are minimal compared to those in a complete count or census.

The Kansas Agricultural Statistics staff includes highly trained agricultural statisticians with farm backgrounds and extensive experience in Kansas and other states, a support staff of statistical assistants, computer personnel, and printing-mailing specialists. Jason Lamprecht is the Deputy Director. Lead Statisticians are Bob White and Joel Golz. Agricultural and Survey Statisticians include Quentin Wearne, Dan Kolterman, Stephen Habets, Sherri Hand, Lisa Prickett, Darin Twete, and Arcus Pierce. Candace S. Thomas provides research and editorial assistance while Dustie Nitcher is our designer and Desktop Publisher. In addition, a field and telephone staff of part-time National Association of State Department of Agriculture (NASDA) interviewers, working under the direction of NASDA supervisors, collect data by personal and telephone interview. The office staff and crew of enumerators join me in thanking the many farmers and agribusiness firms who provide the data and assist in planning our program of statistics.

Glenda Shepler
Director

2008 KANSAS AGRICULTURAL HIGHLIGHTS

In general, 2008 was a good year for Kansas Agriculture. The soybean crop set a new record in production for the State, surpassing the previous record set in 2004 by 9.1 million bushels. Planted and harvested acreage for soybeans also set a new record high. Wheat and sorghum grain production was up, while corn production was down from the previous year. The marketing year average price for wheat, corn, all hay, alfalfa, and other hay set record highs. Cash receipts for all hogs set a new record in 2008, while cattle and calves cash receipts were third highest on record. Prices for both cattle and hogs were mixed throughout 2008. The value of all farmland and buildings continued their upward trend and was 4 percent above 2007.

Seeding of wheat acres began the first week of September and progressed behind average throughout the fall. By November 4th, 97 percent of the wheat in the State had been seeded. Emergence also progressed behind normal with 96 percent of the crop emerged by November 25th. Soil moisture conditions were mostly adequate throughout the fall. As of November 25th, 47 percent of the topsoil moisture and 55 percent of the subsoil moisture was adequate to surplus. Wheat condition was rated 43 percent good to excellent. The State received rain, freezing rain, and snow in December. Precipitation was moderate and scattered throughout the State the rest of the winter. The State experienced below normal temperatures in December, above normal in January, and normal in February. As of March 2nd, topsoil moisture was rated 84 percent adequate to surplus, compared to 94 percent a year earlier. As of April 27th, only 60 percent of the wheat was jointing compared to 90 percent for the 5-year average. Temperatures were moderate across the State all spring. The eastern part of the State received scattered showers every week of March and the whole State received precipitation during April with the heaviest amounts in the east. Statewide, topsoil moisture ranged from 72 to 90 percent adequate to surplus during March and April. However, the western third of the State had significant short to very short topsoil rating in March and only improved moderately with the late April showers. Moisture conditions in the southwest continue to remain very dry with topsoil rating at 70 percent short to very short on April 27th. Wheat condition ratings ranged from 34-38 percent fair and 41-48 percent good to excellent during March and April. Temperatures were moderate the first half of May and then warmed up the last half. Most areas of the State received moisture throughout the month with accumulations over 2 inches in the eastern two-thirds. Some areas received hail and flooding. Topsoil moisture was rated 87 percent adequate to surplus on June 1st. The southwest part of the State was still dry with a topsoil rating of 96 percent short to very short. Disease infestation steadily increased during the month and was rated at 49 percent light to moderate on June 1st. The percent of the crop rated good to excellent remained stable during May and was 47 percent good to excellent on June 1st. Wheat headed was behind average the entire month and 14 percent of the wheat was turning on June 1st, behind the 5 year average of 47 percent. Wheat harvest was 36 percent complete on June 29th, compared to 48 percent the previous year, and 69 percent for the five year average. Crop progress continued to be behind average all month. The eastern half of the State received heavy rains the first two weeks of June. Most of the State received scattered showers the last two weeks of June. On June 29th, 37 percent of the crop was rated fair and 41 percent was rated good to excellent. Wheat harvest made good progress the first week of July and was nearly complete across most of the State by the middle of the month.

Wheat production in 2008 was 356.0 million bushels, 25 percent above the 2007 crop of 283.8 million bushels. The yield, at 40 bushels per acre, was up 7 bushels from a year earlier. The acreage harvested for grain, at 8.90 million acres, was up 3 percent from 2007. Prices for wheat were above 2007 level's from January through September but took a downward swing for the remainder of the year. The preliminary marketing year average price, at \$7.15 per bushel, was up \$1.22 from 2007 and generated a value of production of \$2.545 billion, 51 percent above the previous year. Both the marketing year average price and value of production set new record highs. Kansas regained its status as the number one wheat state in the Nation in 2008.

Seeding of the 2009 wheat crop began the second week of September and was ahead of the average until the second week of October. Statewide, heavy rain was received the last three weeks of October with only 4 percent of the wheat being planted those 3 weeks. By November 16th, 97 percent of the wheat in the State had been seeded. Emergence progressed ahead of normal with 95 percent of the crop emerged by November 23rd. Soil moisture conditions were mostly adequate throughout the fall. Wheat condition was rated 67 percent good to excellent on November 30th.

During April, May and June, rainfall was above average across most of the State for the 2008 corn crop. Topsoil and subsoil moisture were mostly adequate or surplus in all districts except the southwest during this time. Corn planting was completed in favorable soil moisture, but was at times, delayed by wet field conditions. Planting lagged behind the 5 year average throughout the period, but by June 1st, 98 percent of the crop had been planted. Crop development lagged slightly behind the average through most of the growing season due to the later planting. Mostly adequate soil moisture conditions through the growing season allowed corn to progress well with a majority of condition being rated good or excellent. On August 31st, the crop was rated 13 percent very poor to poor, 36 percent fair, and 51 percent good to excellent. Corn harvest was late in 2008, not getting started until mid-September. Harvest progressed steadily throughout the fall, but was not complete until the end of November.

Corn production was 486.4 million bushels, down 4 percent from 2007's record crop. The 2008 yield was 134 bushels per acre, 4 bushels below the previous year. Acreage harvested for grain, at 3.63 million, was down 1 percent from 2007. This was the nineteenth year in a row that corn production exceeded sorghum production. Prices for corn remained above 2007 levels except for December. The preliminary marketing year average price of \$4.25 per bushel for corn set a new record high and generated a value of production of \$2.067 billion. Corn acres harvested for silage was 170,000 acres, up 10,000 acres from the previous year.

Sorghum planting progress was behind normal nearly all spring. By July 13th, planting was nearly complete and 95 percent of the crop had emerged. Sixty-six percent of the crop was rated in good to excellent condition at that time. The State received average precipitation from May through July and became dry in August. Temperatures were cooler than normal, with only a few weeks in excess of 100 degrees the last part of July through August. By September 7th, 61 percent of the crop was in good to excellent condition. Harvest began in late September but remained behind average most of the fall due to delays in planting and cool weather. However, by November 30th, 93 percent of the crop had been harvested, compared to 97 percent for the 5-year average.

Sorghum grain production was 214.5 million bushels in 2008, up 2 percent from the 2007 crop of 209.4 million bushels. The yield averaged 78 bushels per acre, down 1 bushel from the previous year. Harvested acreage for grain, at 2.75 million acres, was up 100,000 acres from 2007. Sorghum prices set new record highs for all months except December in 2008. The preliminary 2008 marketing year average price of \$3.22 per bushel generated a value of production of \$690.7 million, 19 percent below 2007. Kansas retained its position as the number one sorghum grain producing State in the U.S. Sorghum acres harvested for silage were 70,000, down 10,000 acres from 2007.

Soybean planting progressed behind 2007 and well behind the 5-year average. Heavy rainfall in much of the major soybean districts extended soybean planting into early July. By June 29th, 16 percent of soybeans still had not been planted, compared to 5 percent for the 5-year average. Favorable conditions for much of the state during July and August allowed plants to physiologically return to their 5-year averages. By the beginning of September, 88 percent of the soybeans had set pods, compared to 91 percent for the 5-year average. At the same time, topsoil moisture was 6 percent very short, 21 percent short, 67 percent adequate, and 6 percent surplus. As of October 5th, 21 percent of the soybeans had been harvested and 69 percent of the crop was rated in good to excellent condition. Soybean harvest slowed by the end of October and fell behind both 2007 and the 5-year average. As of November 16th, 88 percent of the soybeans had been harvested compared to 99 percent the previous year and 95 percent for the 5-year average.

Soybean production was 120.3 million bushels, up 40 percent from the last year and set a new record high. The previous record was 111.1 million bushels set in 2004. Yield, at 37 bushels per acre, was up 4 bushels from the previous year but down 4 bushels from the record yield set in 2004. Harvested acreage, at 3.25 million acres, was up 25 percent from the previous year and set a new record for acres harvested. Planted acreage also set a new record, at 3.30 million acres, up 25 percent from the previous year's acreage. Soybean prices for year 2008 were above the previous year for all months except November and December. Based on the preliminary marketing year average price of \$8.60 per bushel, the value of production for the 2008 crop was \$1.034 billion, 19 percent above 2007 and new record high.

All hay production totaled 6.77 million tons, up 4 percent from 2007. Area harvested, at 2.75 million acres, was down 150,000 acres from the previous year. The preliminary marketing year average price of \$117.00 per ton resulted in a value of production for the 2008 crop of \$711.0 million, up 16 percent from 2007. Grazing and stock water supplies were adequate across the State for 2008. Monthly prices for all hay in 2008 were below 2007 levels from January through May but took an upward swing in June and set new monthly record highs for the remainder of the year.

All cattle and calves on farms and ranches on January 1, 2009, totaled 6.30 million head, down 350,000 head from January 1, 2008. Cash receipts from the sale of cattle totaled \$6.24 billion, down 1 percent from 2007's record of \$6.32 billion. Monthly cattle prices in 2008 were mixed throughout the year. January, February, and June through September were above last year, while March through May and October through December were below year ago levels. The 2008 calf crop, at 1.43 million head, was down 3 percent from last year.

The December 1, 2008 hog inventory in Kansas was 1.74 million head, 7 percent below the previous year and the smallest December 1 hog inventory since 2004. Total cash receipts from hogs set a new record high of \$421.1 million, up 3 percent from 2007 and up 2 percent from the previous record set in 1997 of \$414.8 million. Monthly hog prices in 2008 were also mixed throughout the year. January through April and June prices were down, while May and July through December prices were above last year.

¹ Beginning with 1975, a farm is defined as any place with at least \$1,000 in annual sales of agricultural products. Between 1959 and 1975, a farm was defined as a place of 10 or more acres that had \$50 or more in annual sales of agricultural products or a place with fewer than 10 acres and annual sales of \$250 or more. Prior to 1959, a farm was defined as three acres or more with a value of farm products amounting to \$150 or more or fewer than three acres with sales of at least \$250.

² Land in farms estimates not available on an annual basis until 1950. NOTE: Complete data series available by request.

¹ Horse and mule estimates combined in 1956 and discontinued in 1961. In 1998, the estimate includes horses, ponies, mules, burros, and donkeys; series discontinued in 2000. ² Hog inventory is January 1 for 1867-1954 and December 1 of the preceding year for 1955 to date. ³ Milk cows that have calved beginning 1970. ⁴ All sheep beginning 1974. ⁵ Value of all livestock does not include equine. NOTE: Complete data series available by request.

¹ Prior to 1926, no records kept on acres planted. ² Beginning in 1986, acres harvested for all purposes no longer included acres harvested as forage. ³ Beginning in 1985, price per bushel is marketing year average price, which does not include an allowance for loans outstanding and government purchases. NOTE: Complete data series available by request.

INDEX

<u>TABLE of CONTENTS.....</u>	i
<u>2008 AGRICULTURAL HIGHLIGHTS.....</u>	ii-iii
<u>GENERAL STATISTICS.....</u>	2-9
Agribusiness.....	5
Agricultural export shares.....	3
Agricultural statistics districts.....	Inside Back Cover
Commercial Grain Storage Capacity.....	4
Crops: 2007 Census acreage harvested and market value, by county.....	6-7
Farms: 2007 Census number of farms and land in farms, by county.....	6-7
Feed: commercial, sales of.....	5
mill feed produced.....	5
Fertilizer: sales.....	5
Flour production.....	5
Off-Farm Number of Grain Storage Facilities.....	4
Rank of Kansas agriculture.....	2
Stocks of Grain by Quarter.....	4
2007 Census market value of livestock produced, by county.....	6-7
Weather data, by district and county.....	8-9
Weights and Measures.....	81
<u>CROP STATISTICS.....</u>	10-54
Corn: all, acres planted and harvested, by county.....	28-31
grain: acreage, yield, production, by county.....	28-31
irrigated and dryland grain production, by county.....	32-33
silage: acreage, yield, and production, by county.....	34-35
Cotton: acreage, yield, production, by county.....	54
Dry Beans: acreage, yield, production, by county.....	54
Hay: Alfalfa: acreage, yield, production, by county.....	44-46
All Other: acreage, yield, production, by county.....	47-49
All Hay: acreage, yield, production, by county.....	50-53
Oats: acreage, yield, production, by district.....	54
Pasture: acres, by county, 2007 Census.....	50-51
Sorghum: all: acres planted and harvested, by county.....	22-24
grain: acreage, yield, production, by county.....	22-24
irrigated and dryland grain production, by county.....	25-26
silage: acreage, yield, and production, by county.....	27
Soybeans: acreage, yield, production, by county.....	36-38
irrigated and dryland production, by county.....	39-40
State Summary: Acreage, yield, production, and value.....	11
State Summary: 2007 Census number of farms and harvested acres, by crop.....	11
Sunflowers: all: acreage, yield, production, by county.....	41-42
oil & non oil: acreage, yield, production, by district.....	43
Wheat: acreage, yield, production, by county.....	12-15
summer fallow and continuous cropped grain production, by county....	18-19,21
irrigated and dryland grain production, by county.....	16-17,20

<u>LIVESTOCK STATISTICS</u>	55-67
Cattle: calves born, by county.....	61-64
all cattle and calves, inventory by county.....	61-64
beef cows, inventory, by county.....	61-64
commercial slaughter, by month.....	57
milk cows, inventory, by county.....	61-64
milk cows and production, by month.....	65
milk cows, production, by county.....	66
inventory, by classes.....	56
number of cattle operations.....	56
production, disposition, income.....	58
Cattle on feed: classification and weight groups, by quarter.....	59
marketings and placements, by month.....	59
marketings - grain fed and other.....	58
marketings, by size group.....	58
inventory, by county.....	61-64
number of feedlots, by size group.....	58
Dairy: milk production.....	66
Hog: inventory, by district.....	67
inventory, by class.....	56
number of hog operations.....	56
pig crop, by district.....	67
production, disposition, income.....	60
Honey: number of colonies, yield, production, stocks, price, and value.....	67
Sheep: inventory, by classes.....	56
number of sheep operations.....	56
lamb crop.....	56
production, disposition, income.....	60
Wool: production, price and value.....	60
<u>ECONOMIC STATISTICS</u>	68-71
Farm income.....	69
Farmland values and rents.....	71
Income from farming, cash receipts, gross and net farm income.....	69
Production expenses.....	70
<u>HISTORICAL STATISTICS</u>	72-78
Historical tables.....	73-78
corn: acreage, yield, production, price and value, 1870-2008.....	78
livestock, inventories and value, 1870-2009.....	74
number of farms and land in farms, 1900-2008.....	73
sorghum: acreage, yield, production, price and value, 1930-2008.....	76
soybeans: acreage, yield, production, price and value, 1925-2008.....	77
wheat: acreage, yield, production, price and value, 1890-2008.....	75

Bushel weights:
Wheat & soybeans = 60 lbs.
Corn, sorghum & rye = 56 lbs.
Barley (grain) = 48 lbs
Oats = 32 lbs.
